

# APGeoBot

I want to create a practice test generating bot for AP Human Geography

## Problem

- Studying for free response tests is difficult
- Students want to practice for the written portions of the AP test
- Students want feedback on the quality/effectiveness of their answers

## Target Community

- AP Human Geography students
- Students who struggle with free-response questions
- Teachers that want to help their students

## Solution

- Use Python and the OpenAI API to generate practice tests for the Human Geography AP exam
- The program will give feedback about the user's answer, telling them what to improve on
- Questions will follow a similar format to the AP test and will be graded in a similar way
