

# APGeoBot

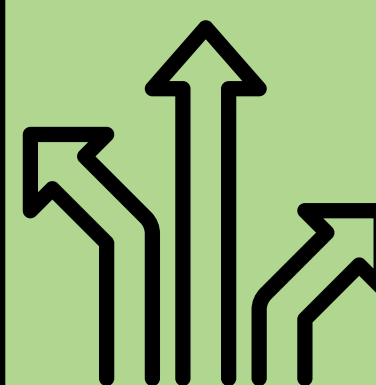

## REFLECTION

### Why things changed

- I wasn't prepared enough
- I didn't leave myself enough time to achieve what I wanted
- My original goals were too hard to achieve

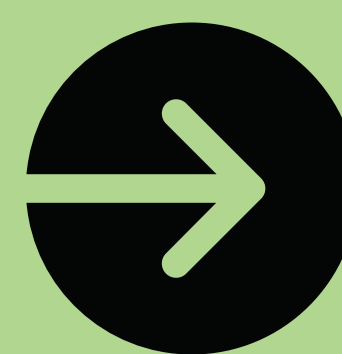

### What I would do differently

- I would have planned out the project better
- I would have done more research before just jumping in
- I would have managed my time better

### What I would do the same

- I think I did a good job figuring out what programs / tools I needed
- I would have used the same resources and tutorials

### Will I continue this project?

- No, I won't continue this project
- I think I could take it a lot farther but I want to branch out and try something new next year

### What I learned

- I learned how to use the OpenAI API which I think is an excellent skill to have
- I also improved my coding skills which were limited to begin with
- Additionally, I learned about the AP Human Geography exam and how to study for it
- I also learned some lessons surrounding project planning and time management
