

Our Project Reflection

What went well? What didn't?

Our idea of making a physical model of our streetlight was going to be too hard for us to build. It's okay though because we successfully made a website, a digital model, and informed you of how harmful streetlights are to our climate.

What did we learn from the process?

Our first I2 project has taught us a lot about what we should do and not do next year. One very important thing is that we shouldn't procrastinate.

We procrastinated for a good amount of the project but once we overcame it we became productive and made our project turn out nice. Another thing is that we forgot to have fun. I2 is a project that you should take seriously, but if you don't have fun, doing the project will just feel like a boring task.

Advice to incoming I2 Students

- Start Early (You'll have a huge advantage)
- Don't put it off
- Don't do everything last minute
- Do your project on something you passionate about
- Have fun
